

# Harborlight Bay Resort

## Guest Operations Standard Operating Procedures

| Field          | Value                                                              |
|----------------|--------------------------------------------------------------------|
| Document ID    | SOP-RGO-001                                                        |
| Version        | 1.1                                                                |
| Audience       | Front Office, Housekeeping, Engineering, Security, Duty Management |
| Use            | Synthetic knowledge base for the Resort Guest Operations Copilot   |
| Classification | Portfolio demo - no real guest or property data                    |

Important: Harborlight Bay Resort is fictional. All room numbers, service targets, fees, authority limits, and procedures in this document are invented for a public portfolio demonstration. They must be replaced and approved before any real-world use.

Prepared for an internal employee-facing AI workflow

# 1. Purpose, scope, and operating principles

This SOP gives employees a consistent reference for routine guest requests, facilities issues, approvals, and emergency escalation. The Resort Guest Operations Copilot may retrieve these rules, classify a request, draft a response, and create an audit record. It does not replace employee judgment or authorize commitments.

## 1.1 Mandatory operating principles

- Acknowledge the employee request without claiming that another department has already been notified unless a workflow action confirms it.
- Verify the room number and the minimum operational details needed to act. Do not request or repeat unnecessary personal data.
- Never promise availability, delivery time, compensation, refunds, fee waivers, room changes, or late checkout before the relevant check or approval.
- For immediate safety, medical, security, fire, violence, missing-person, gas, smoke, or electrical hazards, prioritize people and escalation over normal service workflows.
- Record the request status and retain an audit trail using synthetic data in this portfolio environment.

## 1.2 Request status definitions

| Status              | Meaning                                                      | Owner                                     |
|---------------------|--------------------------------------------------------------|-------------------------------------------|
| received            | Request captured but not yet classified                      | Automation                                |
| acknowledged        | Routine request accepted for normal handling                 | Operating department                      |
| pending_approval    | No commitment may be made until an authorized person decides | Supervisor or duty manager                |
| escalated           | Immediate human attention is required                        | Duty manager and relevant emergency owner |
| approved / rejected | A manager decision has been recorded                         | Approver                                  |
| completed           | The operational action was verified as finished              | Assigned department                       |

## 2. Priority and escalation framework

| Priority | Use when                                                           | Initial response target       | Examples                                                        |
|----------|--------------------------------------------------------------------|-------------------------------|-----------------------------------------------------------------|
| Normal   | Routine comfort or amenity request with no material service impact | Acknowledge within 10 minutes | Water, towels, dental kits                                      |
| High     | Guest comfort is materially affected or the issue may worsen       | Human review within 5 minutes | Air-conditioning failure, active leak, repeated service failure |
| Critical | Immediate risk to people, security, or property                    | Escalate immediately          | Gas smell, smoke, fire, medical emergency, violence             |

### 2.1 Human escalation triggers

- Set `needsHumanEscalation` to true only for immediate safety, medical, security, fire, violence, missing-person, or serious facility hazards.
- Notify the duty manager and the responsible emergency function. Employees must follow local emergency procedures and contact emergency services where required.
- Do not wait for routine approval before taking necessary life-safety action.
- Do not tell a guest that a hazard is resolved until an authorized responder confirms it.

### 2.2 Management approval triggers

- Refunds, compensation, fee waivers, late-checkout exceptions, non-standard room moves, and financial commitments require the authority specified in this SOP.
- An approval request is not an emergency unless a separate immediate safety risk exists.
- Before approval, employees may apologize, gather facts, and explain that a manager will review the request; they may not promise the outcome.

Routing precedence: If both `needsHumanEscalation` and `requiresApproval` are true, immediate human escalation takes precedence. Approval for financial remedies follows after the situation is safe.

### 3. Housekeeping and guest amenities

| Request                | Standard rule                                                                                                                                                | Target                                                     | Approval                           |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------|------------------------------------|
| Towels or linen        | Confirm room number and quantity. Standard quantities may be dispatched when stock is available.                                                             | Delivery within 20 minutes                                 | Not required                       |
| Bottled water          | Up to four complimentary bottles per room per request. More than four requires housekeeping supervisor confirmation.                                         | Delivery within 20 minutes                                 | Supervisor if over four            |
| Dental or shaving kits | Up to two kits of each type per room per request when stock is available.                                                                                    | Delivery within 20 minutes                                 | Not required                       |
| Baby crib              | Confirm infant age, room number, and stock. Cribs are complimentary. Housekeeping must install and complete a safety check; guests should not assemble them. | Confirmation within 10 minutes; delivery within 30 minutes | Not required if stock is confirmed |
| Extra bed              | Subject to room type, fire-code occupancy, availability, and the published fictional fee of SGD 60 per night.                                                | Confirmation within 15 minutes                             | Front office supervisor            |
| Lost property          | Record item description, last known location, and safe contact channel. Do not confirm a match until Security verifies it.                                   | Log immediately                                            | Security verification              |

#### 3.1 Housekeeping response language

Recommended: 'Please confirm the room number and quantity. Once availability is checked, the housekeeping team can arrange delivery.'

Avoid: 'Housekeeping has been notified' or 'It will arrive in 20 minutes' unless dispatch and timing are confirmed by an actual workflow or employee.

## 4. Front office, late checkout, and room moves

### 4.1 Late-checkout policy

| Requested departure                  | Rule                                                                         | Fee                          | Authority                               |
|--------------------------------------|------------------------------------------------------------------------------|------------------------------|-----------------------------------------|
| Up to 12:00                          | May be offered only after checking same-day occupancy and room status.       | Complimentary                | Front desk agent                        |
| After 12:00 to 15:00                 | Subject to occupancy and housekeeping impact.                                | 50% of the nightly room rate | Front office supervisor                 |
| After 15:00                          | Treat as an additional night, subject to availability.                       | Full nightly room rate       | Duty manager                            |
| Elite, recovery, or exceptional case | Apply the relevant approved benefit or documented service-recovery decision. | As approved                  | Front office supervisor or duty manager |

- Requests should be submitted before 10:00 on the departure date where possible.
- Never confirm late checkout before checking occupancy and operational impact.
- The Copilot may summarize the rule but cannot see live room inventory unless a separate system integration supplies it.

### 4.2 Room moves

- Verify the reported issue and check room availability before offering a move.
- A like-for-like operational move requires front office supervisor confirmation.
- An upgrade, downgrade with refund, or move involving compensation requires duty manager approval.
- For an immediate safety hazard, move the guest to safety first under emergency direction; complete commercial approval afterward.

## 5. Engineering and facilities response

| Issue                                         | Priority | Required action                                                                                                                                                               | Target                                                      |
|-----------------------------------------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------|
| Air-conditioning not cooling                  | High     | Confirm room and symptoms. Ask whether there is smoke, burning smell, sparking, or a vulnerable guest. If none, request Engineering inspection; do not promise a repair time. | Human review within 5 minutes; inspection target 20 minutes |
| Water leak contained                          | High     | Ask guest to avoid the wet area. Notify Engineering and Housekeeping after dispatch is confirmed.                                                                             | Inspection target 15 minutes                                |
| Active flooding or water near electricity     | Critical | Keep people away, escalate immediately, and follow emergency isolation procedures.                                                                                            | Immediate                                                   |
| Power outlet sparking or burning smell        | Critical | Tell occupants not to touch the outlet or nearby switches. Escalate to Engineering, Security, and duty manager.                                                               | Immediate                                                   |
| Elevator service complaint without entrapment | High     | Record location and symptoms; request Engineering review.                                                                                                                     | Human review within 5 minutes                               |
| Elevator entrapment                           | Critical | Keep communication with occupants, contact the authorized response team, and escalate immediately. Do not attempt an unauthorized rescue.                                     | Immediate                                                   |

### 5.1 Air-conditioning compensation

- Engineering verification should precede compensation review where practical.
- Employees may apologize and explain that the duty manager will review the service impact.
- Employees may not promise a refund, free night, upgrade, or fee waiver.

## 6. Compensation and approval authority

| Proposed remedy                                                   | Minimum authority                               | Required record                                       |
|-------------------------------------------------------------------|-------------------------------------------------|-------------------------------------------------------|
| Non-monetary amenity up to SGD 25 fictional value                 | Department supervisor                           | Issue facts, guest impact, approver, remedy           |
| Credit, refund, or waiver up to SGD 100                           | Duty manager                                    | Issue facts, service verification, amount, approver   |
| Credit, refund, or waiver over SGD 100                            | Operations manager                              | Full incident summary and duty manager recommendation |
| Complimentary night or full nightly-rate waiver                   | Operations manager                              | Verified incident, financial impact, written decision |
| Liability, injury, discrimination, data incident, or legal threat | Duty manager plus designated corporate function | Restricted incident record; do not admit liability    |

These limits are fictional portfolio data. The Copilot may identify the required authority and draft an approval request, but only a recorded human decision changes the request to approved or rejected.

### 6.1 Approval request checklist

- Room or case reference without unnecessary personal data
- Verified facts and department findings
- Guest impact and requested remedy
- Proposed remedy and fictional monetary value
- Required authority level
- Approver identity, decision, timestamp, and optional note

## 7. Safety, security, and privacy

### 7.1 Gas smell, smoke, or fire

- Move people away from the affected area and follow the property's emergency plan.
- Do not operate electrical switches, create sparks, or use an open flame near a suspected gas leak.
- Notify Security, Engineering, and the duty manager immediately; contact emergency services where required.
- Do not state that the area is safe until an authorized responder confirms it.

### 7.2 Medical emergency

- Contact the authorized emergency response channel immediately and provide the exact location.
- Do not diagnose, prescribe medication, or delay professional help.
- Keep access routes clear and assign an employee to guide responders when safe.

### 7.3 Privacy and data minimization

- Do not enter passport numbers, payment card details, medical records, access codes, or full identity documents into the Copilot.
- Use room number, operational facts, and the minimum case context necessary.
- Do not expose chat IDs, sender IDs, API keys, access tokens, credentials, or webhook URLs in screenshots or public repositories.
- This portfolio environment must contain synthetic guest and employee data only.

## 8. Resort service reservations

This section governs employee requests to create, change, or cancel fictional resort service reservations. The Copilot may collect details and create a pending record. It must never claim that a reservation is confirmed until an authorized booking source returns confirmed status.

### 8.1 Supported reservation types

| Service           | Required information                                                     | Key rule                                                                                                                                     | Cancellation                                                                    |
|-------------------|--------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------|
| Spa               | Room reference, service, preferred date and time, guest count            | Subject to therapist and treatment-room availability. Guests under 16 require guardian confirmation. Do not collect medical history in chat. | No fee 12 or more hours before; 50% fictional fee within 12 hours; no-show 100% |
| Restaurant        | Venue, date, time, party size, dietary or accessibility notes            | A request is not confirmed until the restaurant booking source accepts it. Tables are held for 15 minutes.                                   | No fictional fee before 4 hours; late cancellation subject to venue policy      |
| Airport transfer  | Pickup date and time, flight number, terminal, party size, luggage count | Do not collect passport or payment-card data. External transport provider confirmation is required.                                          | No fictional fee 24 or more hours before; provider fee may apply later          |
| Resort activity   | Activity, date, time, participant count, relevant age group              | Capacity, weather, age, and safety requirements must be checked before confirmation.                                                         | No fictional fee 4 or more hours before unless a vendor rule applies            |
| Facility timeslot | Facility, date, time, duration, participant count                        | Confirm operating hours and capacity. Special setup may require supervisor approval.                                                         | No fictional fee before 2 hours                                                 |

### 8.2 Reservation lifecycle

| Status               | Meaning                                                           | Permitted employee statement                                          |
|----------------------|-------------------------------------------------------------------|-----------------------------------------------------------------------|
| requested            | Minimum details captured; availability not checked                | Your request has been captured for an availability check.             |
| pending_information  | One or more required fields are missing                           | Please provide the missing date, time, party size, or room reference. |
| pending_availability | A lookup or provider response is still required                   | The requested time is not yet confirmed.                              |
| pending_confirmation | A slot is available but guest or manager confirmation is required | The option is being held pending confirmation.                        |
| confirmed            | The authorized booking source returned a booking reference        | The reservation is confirmed under reference [synthetic reference].   |
| modified             | A confirmed booking was changed and reconfirmed                   | The updated reservation is confirmed.                                 |
| cancelled            | Cancellation was accepted and any fictional fee recorded          | The reservation is cancelled; the recorded fee is [amount or none].   |
| rejected             | Availability or policy prevented the request                      | The request could not be confirmed; offer approved alternatives.      |

8.3 Create, modify, and cancel rules

- Create: collect required fields, check the relevant fictional availability source, present options when needed, and create a pending record before confirmation.
- Modify: require the existing booking reference, identify only the changed fields, re-check availability, and retain the prior state in the audit trail.
- Cancel: require the booking reference, calculate the applicable fictional cancellation window, disclose any fee before completing the cancellation, and record the final status.
- Idempotency: use the Feishu event ID for the request and a stable booking reference for later modifications so a retried event cannot create a second booking.
- Authorization: complimentary exceptions, waived cancellation fees, capacity overrides, or vendor commitments require supervisor or duty-manager approval.
- Truthfulness: retrieved SOP text describes policy only. It is not evidence of current availability, provider acceptance, payment, dispatch, or confirmation.

8.4 Missing-information behavior

When required information is missing, the Copilot should ask one concise follow-up containing only the necessary fields. Example: 'Please confirm the spa service, preferred date and time, number of guests, and room reference. The appointment is not confirmed yet.'

8.5 Reservation test scenarios

| Employee message                                                   | Expected behavior                                                                                          |
|--------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------|
| Book a spa treatment tomorrow for room 308.                        | Ask for treatment, preferred time, and guest count; do not confirm.                                        |
| Move booking SPA-TEST-104 from 15:00 to 17:00.                     | Check 17:00 availability, preserve the original record, and confirm only after the booking source accepts. |
| Cancel tonight's restaurant booking RST-TEST-205.                  | Check timing and venue policy, disclose any applicable fictional fee, then record cancellation.            |
| Arrange airport pickup for flight AB123 at 18:20 for three guests. | Ask for date, terminal, pickup location, and luggage count; do not request passport data.                  |

## 9. Copilot response and audit requirements

### 9.1 Required structured output

| Field                | Purpose                                                | Allowed example                                        |
|----------------------|--------------------------------------------------------|--------------------------------------------------------|
| category             | Operational department or case family                  | Housekeeping, Front Office, Engineering, Safety, Other |
| priority             | Operational urgency                                    | Normal, High, Critical                                 |
| summary              | Short factual description                              | Room 512 requests three bottles of water               |
| suggestedReply       | Employee-facing guidance in the user's language        | Confirm room and quantity, then arrange delivery       |
| requiresApproval     | Whether a human decision is required before commitment | true or false                                          |
| needsHumanEscalation | Whether immediate emergency handling is required       | true or false                                          |
| route                | Deterministic workflow branch                          | routine, manager_approval, human_escalation            |
| status               | Audit lifecycle state                                  | acknowledged, pending_approval, escalated              |

### 9.2 Response quality rules

- Use the same language as the employee's message.
- State what is known, what must be verified, who has authority, and what the employee should do next.
- Do not present retrieved policy as live inventory or proof that an action occurred.
- When retrieved information is missing or conflicting, say so and request human confirmation.
- Every operational record must use the Feishu event ID as an idempotency key to reduce duplicate processing.

### 9.3 Portfolio test scenarios

| Test message                                     | Expected route   | Expected policy                                                        |
|--------------------------------------------------|------------------|------------------------------------------------------------------------|
| Room 615 needs two dental kits.                  | routine          | Up to two kits; target delivery 20 minutes after dispatch confirmation |
| Can I approve free late checkout until 14:00?    | manager_approval | Supervisor approval; 50% nightly rate applies in this fictional SOP    |
| Guest requests a free night after an AC failure. | manager_approval | Operations manager for a complimentary night                           |
| There is a strong gas smell in the kitchen.      | human_escalation | Immediate evacuation and emergency escalation                          |
| A guest asks whether a crib is available.        | routine          | Check inventory; complimentary; staff installation and safety check    |
